

Drawsystem

User Manual

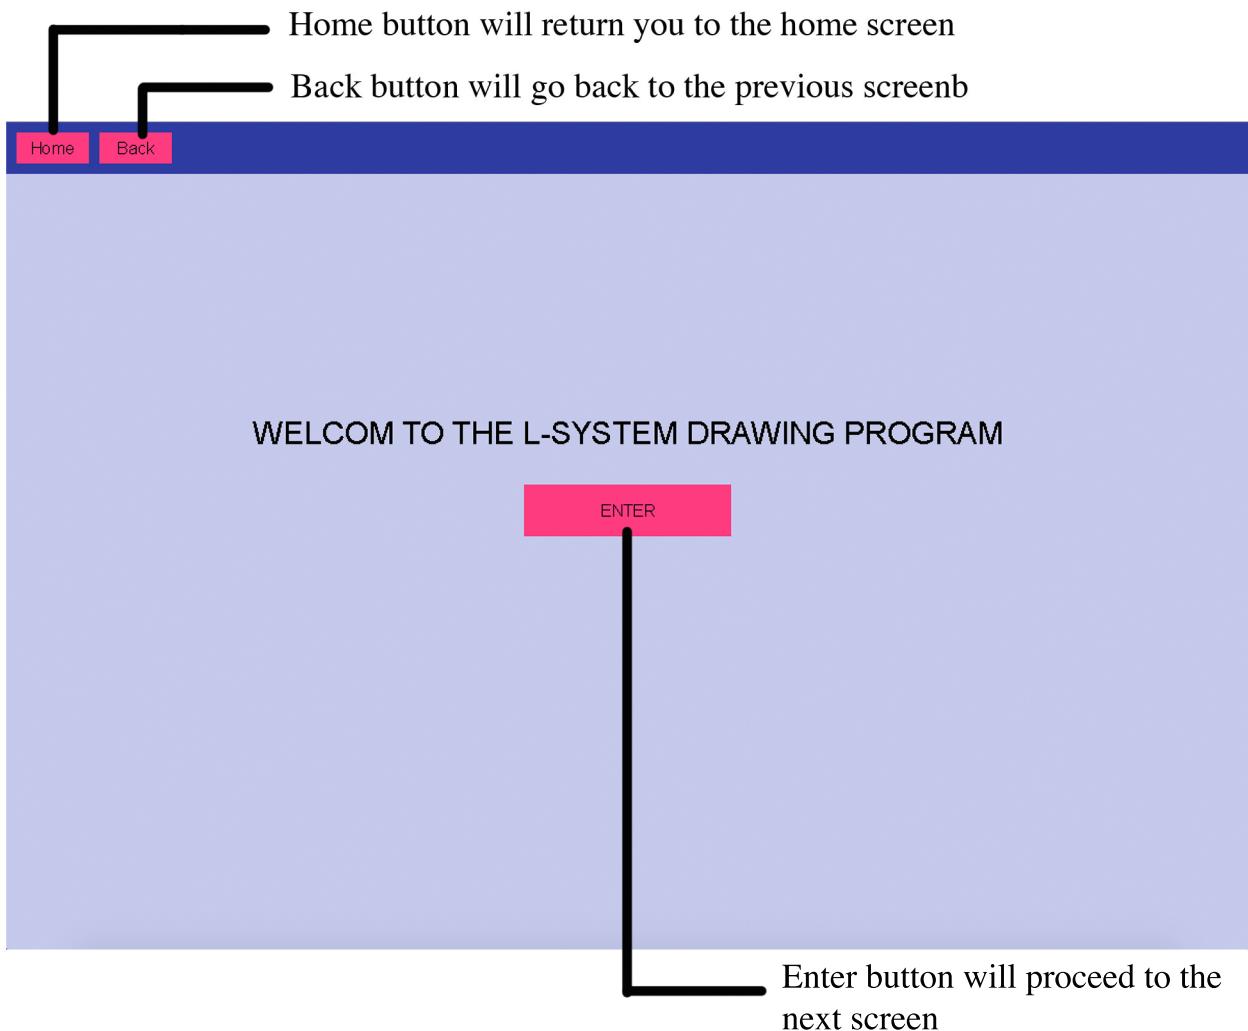

Quentin Corker-Marin

Setting Up

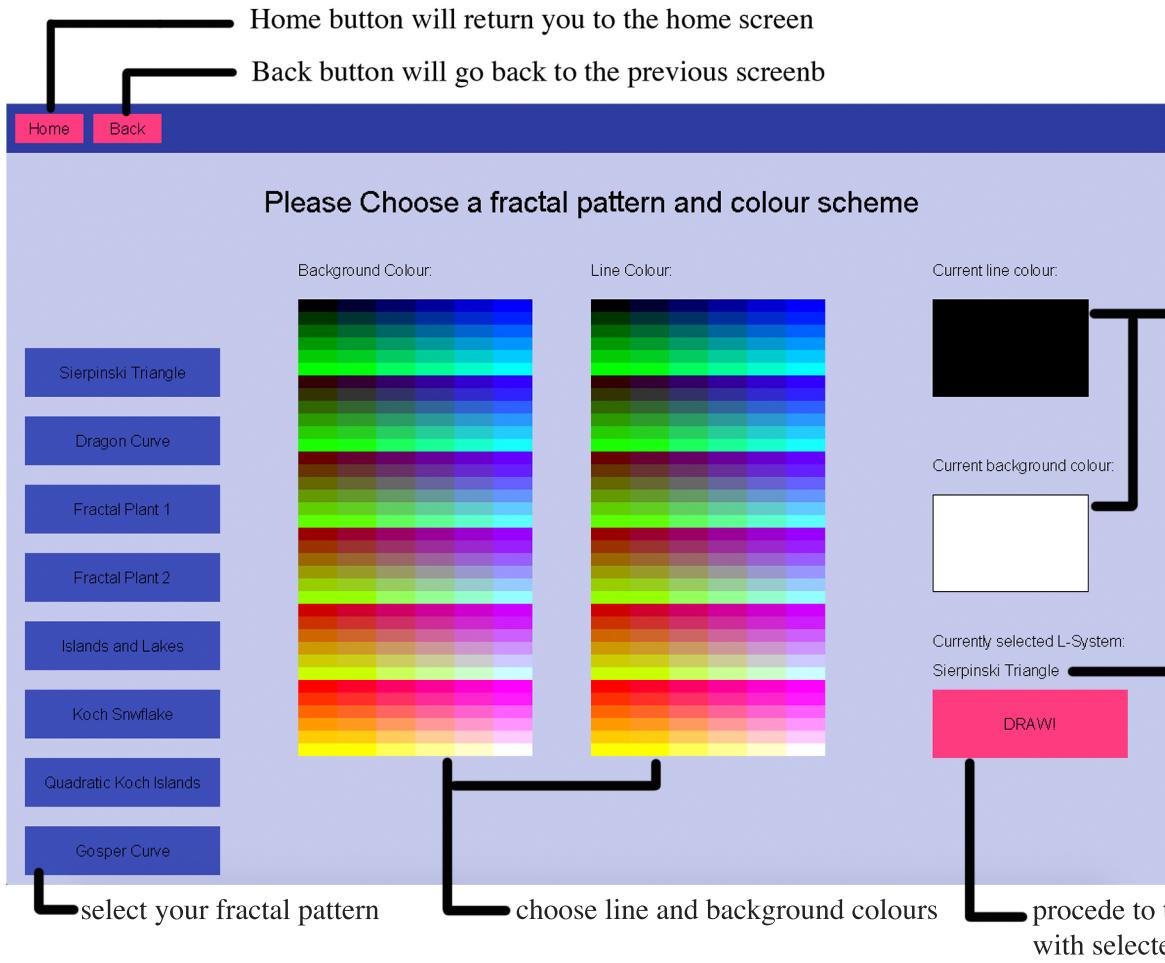

1. Ensure SDL is installed on the computer. If it is not, it can be found online at <https://www.libsdl.org/>.
2. Open a terminal window and navigate to the /drawsystem directory.
3. Run the Makefile by typing ‘make’ into the terminal, this will compile all the source code contained in the /src directory and place an executable file in the /drawsystem directory.
 - a) running ‘make clean’ in the terminal will get rid of the object files produced by the compilation, leaving the executable.
 - b) running ‘make -B’ will force all source files to be recompiled.
4. You can now run the program by typing ‘./drawsystem’ in the terminal and hitting enter.

The User Interface

1. Home Screen:

2. Options Screen

3. Drawing Screen
